

Pushbuttons and indicator lights for every application

Program overview

SIRIUS

Answers for industry.

SIEMENS

Always know what is happening: SIRIUS 3SB3 commanding and signaling devices

Special attention has to be paid to the interaction between man and machine. Fault sources and system disturbances must be signaled reliably – and as early as possible. And if things do get critical – the top priority is to safely and quickly stop machines and bring systems offline. Our extensive range of SIRIUS commanding and signaling devices is designed to meet the challenge. From pushbutton units, indicator lights, EMERGENCY SWITCHING-OFF/EMERGENCY STOP pushbuttons, two-hand operating consoles, foot switches, integrated signal lamps, and cable-operated switches – with SIRIUS commanding and signaling devices you can be confident in being able to handle every situation.

Innovative technology, revolutionary mounting and installation

Our complete range of pushbutton units and indicator lights is part of our extensive portfolio of SIRIUS commanding and signaling devices. This complete range is modular, well-proven in practice and is 100 % fit for industrial environments. Whether in plastic or rugged metal versions with a high IP67 degree of protection – we have the right solution for every application.

SIRIUS pushbutton units and indicator lights are not only innovative when it comes to technology and design – they are revolutionary as they are so simple to mount: Actuators and indicators, holders and contact blocks or lamp holders can be easily and safely assembled by one person with just a few hand movements. Simple and fast. The 3SB3 two-hand operating console and the 3SE2 foot switch round off our range of pushbutton units and indicator lights.

Convincing advantages

- Fast and reliable mounting by just one person
- Base or front panel mounting (also within incandescent lamp, LED or integrated LED)
- Only one standard tool is required to mount
- Rugged metal version with a high IP67 degree of protection
- Versions with screw, spring-loaded terminal or solder pin connection systems
- Automatic inscription using the SIRIUS Label Designer
- Integrated in AS-Interface; directly connected to ASIsafe
- Direct attachment to AS-i yellow-shaped cable
- Online configurator to select completely mounted customized housings (<http://www.siemens.com/sirius-commanding>)

Pushbutton units and indicator lights:
Modular, proven in the field and fit for industry

Our 22 mm range of pushbutton units and indicator lights distinguishes itself with its high degree of functionality – and by an absolutely modern, flat design. And, just as innovative: the inherent ease of mounting. This is because actuators, indicators, holders as well as contact blocks and lamp holders can be reliably and firmly attached with just a few movements of the hand by just one person. In addition, the modular design provides a higher degree of flexibility: Multiple contact block types can be combined with both plastic or metal actuators. The same is true for the light elements and indicators.

EMERGENCY STOP mushroom pushbuttons: Reliably and quickly mounted

Our 3SB3 commanding devices are the optimum choice wherever man and machine interact. Here, our EMERGENCY STOP mushroom pushbutton is worthy of special mention. Thanks to its ergonomic design, it can be actuated with any surface of the hand – quickly engaging – therefore ensuring that plants and systems are quickly and reliably stopped when hazardous situations occur. The metal version is suitable for use in the toughest of conditions.

Enclosed operators: Designed for any application

Pushbutton units and indicator lights serve as manual commanding devices in spatially distributed controls. The housings are equipped with the 22 mm operator, contact blocks, and light elements and can be mounted by inserting the actuator element from the front through the hole in the upper section of the housing. The operators are secured using the included holder. The contact blocks and lamp holders with base mounting are snapped into the lower section of the housing. If desired, all enclosures can be equipped with actuator elements and contact blocks and connected to AS-Interface.

Commanding and signaling:

Our portfolio at a glance

	3SB command and signaling devices		
	3SB pushbuttons and indicator lights	3SB3 housing	3SB38 two-hand operation console
Description	Indicator lights, pushbuttons, key-operated switches, illuminated push-buttons, EMERGENCY STOP mushroom pushbuttons, contact blocks and lamp sockets, switches with rotary knobs	Encapsulated pushbuttons, indicator lights, EMERGENCY STOP enclosures, also customized enclosures available upon request	Two-hand operator consoles, including EMERGENCY STOP and 2 mushroom pushbuttons, additional commanding devices can be installed
Version	Molded plastic or metal, round, 22 mm diameter and square 26 x 26 mm	Molded plastic and metal	Molded plastic and metal
Mounting/connection	Can be installed by one person without any special tools, the actuators can be equipped in a modular fashion with contact block and lamp sockets. Screw connections, Cage-Clamp terminals, solder pins	Base or front-panel mounting	Can be mounted to a panel, wall, stand or directly in the plant, screw connection
Degree of protection	IP66/IP67 (molded plastic) and IP67 and NEMA4 (metal)	IP65/IP67 (metal)	IP65
Certification	UL, CSA, CE, BG (3SB3 EMERGENCY STOP)	UL, CSA, CE, BG (3SB3 EMERGENCY STOP)	EN 574, DIN 24980
Relevant Standards	IEC/EN 60947-1; IEC/EN 60947-5-1; IEC/EN 60947-5-5;		
AS-Interface	Pushbuttons and indicator lights can be quickly and simply connected to the AS-Interface communications system using different solutions. EMERGENCY STOP devices can be directly connected using the standard AS-Interface with safety-related communications	Enclosure with integrated AS-Interface. Standard commanding devices and EMERGENCY STOP can be connected in one enclosure. Modular design	Metal consoles can be retrofitted with the safety-related AS-Interface
Safety	Operating personnel actuate the EMERGENCY STOP mushroom pushbuttons to shut down plants and systems when hazardous situations arise	EMERGENCY STOP function with latching according to EN 418	EMERGENCY STOP function with latching according to ISO 13850

3SE commanding devices

3SE7 cable-operated switches

System consisting of switch and cable. With and without latching. LED position display with extremely high illumination

Metal

Screw connection

IP65

UL, CSA, CE

In acc. with ISO 13489-1; up to Performance Level e (EN 954-1, up to Cat. 4) EMERGENCY-STOP in acc. with ISO 13850 (EN 418)

Version with ASIsafe adapter

EMERGENCY STOP function with latching according to ISO 13850

3SE29 foot-operated switches

Foot-operated command devices with either 1 or 2 pedals, with and without protective cover, either momentary or latching contacts

Molded plastic and metal

Screw connection

IP65

UL, CSA, CE

Positively opening contacts in compliance with IEC 60947-5-1

With conventional wiring, via the K45F safety module, K60F can be connected to ASIsafe

Safety foot-operated switch with latching according to ISO 13850

8WD signaling devices

8WD4 signaling columns

Steady light, flashing light, rotating light, flash-type light, buzzing and siren elements

50/70 mm diameter

Simple to mount and install and change lamps without tools. Base/floor, pipe, angled bracket, single-hole mounting. Connected up using Cage-Clamp terminals or screw terminals

IP65
(70 mm diameter)

UL, CSA, CE

IEC 60947-5-1

The 8WD4 signaling columns can be directly connected to the AS-Interface bus system through an integrated adapter element

8WD5 integrated lamps

Steady light, with incandescent lamp or LED; flash-type light and rotating light

Thermo-plastic enclosure, 70 mm diameter

Retained using a PG-29 threaded socket with nut. Screw connection

IP65

UL, CSA, CE

IEC 60947-5-1

Smart add-ons – AS-Interface and SIRIUS Label Designer

Our SIRIUS commanding and signaling devices can be connected up in various ways: Conventionally, through AS-Interface or safely and in a user-friendly fashion via ASIsafe® with our 3TK28 safety relays or to the ET 200S® distributed I/O.

Connection with AS-Interface

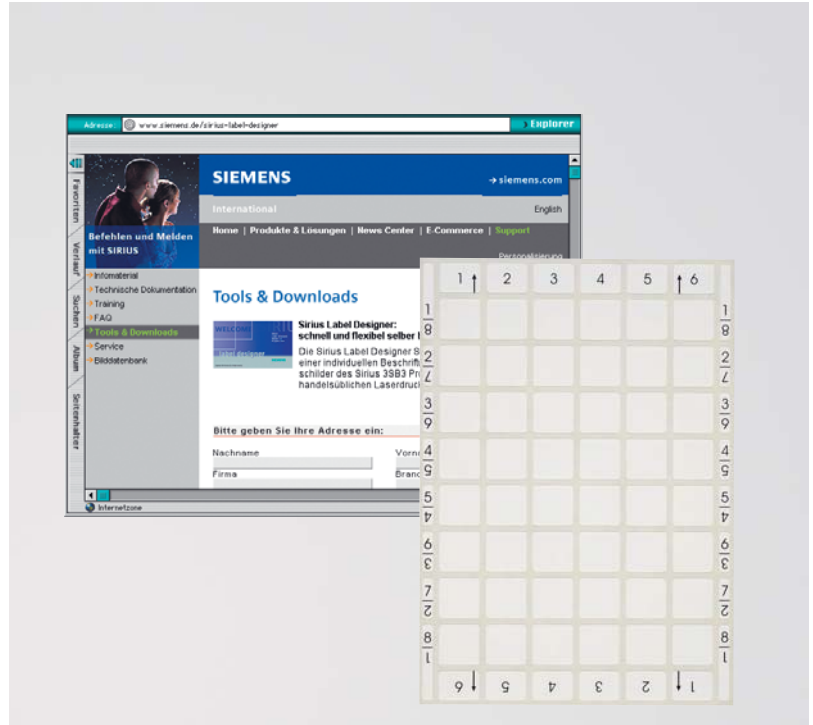

SIRIUS commanding and signaling devices are ideally suited for networked systems in your plant or equipment. The individual components can be integrated into the AS-Interface system. The reason: In compliance with IEC 62026-2, they are fully compatible to AS-Interface components such as master, slaves, power supply, etc. – and can be operated together on the yellow AS-Interface cable. This means that Siemens supplies all of the components to configure a safety-relevant AS-Interface network.

Safety-relevant communications via ASIsafe

Safety-relevant components can be integrated into AS-Interface – up to Cat. 4 according to (EN 954-1) DIN EN ISO 13849-1 or SIL3 according to IEC 61508 – using ASIsafe, the safety-relevant version of AS-Interface. This can be implemented just as simply as for standard components – using the yellow AS-Interface cable. This means that safety-relevant and standard I/O modules are installed and operated together in one and the same network. Safety-relevant data is transferred using the existing standard bus – which means that you profit from enormous cost savings when it comes to installation and engineering. And it goes without saying that all of the relevant standards are complied with. The network infrastructure with AS-Interface master, power supply and shaped cable remains unchanged.

Advantages at a glance:

- Safety-relevant and standard data on just one bus
- Neither failsafe PLC nor special master required
- Groups of safety-relevant signals can be formed
- Simple system configuration using standardized AS-Interface technology
- Existing systems can be quickly and simply expanded

EMERGENCY STOP devices

EMERGENCY STOP devices can be directly connected using the Standard AS-Interface with safety-relevant communications. This applies to SIRIUS 3SB3 EMERGENCY STOP commanding devices. These can either be installed in the front panel or can be mounted in an enclosure. An EMERGENCY STOP device mounted in the front panel can be directly connected to AS-Interface via a safety module (F-adapter).

Software/Tool SIRIUS Label Designer

You can create your own label plates using a commercially available laser printer using this software and the labels that you can inscribe yourself (on Page 13). The adhesive labels are then attached to our plate holders. The latching labels can be snapped-on to the plate holders – the round ones are inserted in the caps of the illuminated pushbuttons and switches. Three-line texts or symbols can be printed. For applications with higher demands, we recommend our plastic plates for laser inscription. More information:

<http://www.siemens.com/sirius-label-designer>

Labels that you can inscribe yourself:

Refer to Page 13

Enclosures* with AS-Interface connection

* Molded-plastic enclosures are equipped with connections for AS-Interface ribbon cables or insulation piercing technology; for the metal versions, the AS-Interface cable is fed into the enclosure.

EMERGENCY STOP
