[1] For shown circuit breakers rated less than this maximum voltage, the indicated short circuit current rating also applies, but at the voltage rating of the circuit breaker
 [2] Short circuit tests are conducted at 100–105% of the maximum rated voltage of the panelboard.
 [3] Suffixes HID, and SWD may also be applied to the applicable branch circuit breakers shown above. Suffix SWN may not be applied in combination with LC main breakers.
 [4] Where QO (B) circuit breakers are shown above, QO (B) H, QO (B) VH, and QOH (B) circuit breakers may also be used.
 [5] Where QO (B) GFI circuit breakers are shown above, QO (B) EPD and/or QO (B) EPE circuit breakers may also be used. QO–EPE only comes in 3 pole construction.
 [6] Where QO (B) AFI circuit breakers are shown above, QO (B) CAFI circuit breakers may also be used.
 [7] Two Pole CAFI breakers are only 120/240 VAC and may only be used on 120/240 VAC single phase 3 wire systems.

- The fuse used in this UL test is an envelope (umbrella) fuse. This fuse is designed as a "worst case" fuse. Thus, no matter what manufacturer's fuse is used, the Square D™ brand circuit breaker is protected.
- The line side fused switch may be in a separate enclosure or in the same enclosure as the loadside circuit breaker. A line side fused switch may be a submain, integral main, or remote main. A load side circuit breaker may be a branch, submain, or an integral main used on the load side of a remote main. This series combination short circuit current rating shall not exceed that of the line side fused switch. The charts apply to Square D™ brand load side circuit breakers only. However, the line side fuse ratings are independent of the fuse manufacturer.
- Not applicable to Corner Grounded Systems.
- Limiters used in Square D™ brand DSL and DSL II fused power circuit breakers are not class L fuses and do not have series ratings.

[12] Series rating valid for 2-pole or 3-pole circuit breakers.

NQ and NF Panelboard Merchandised Selection Procedure

- Review maximum electrical system voltage, ampacity, and available fault current, and determine the type of panelboard is desired (see tables [Table 9.1–Table 9.4](#)).
- Identify type (plug-on or bolt-on) and total quantity of branch circuit breaker poles and panel spaces required (see Digest sections 7 and 9 for catalog numbers).
- Select proper main lug interior (from tables [Table 9.5](#), [Table 9.7](#), or [Table 9.40](#)) or:
 - Select main circuit breaker interior and main circuit breaker adapter kit (from tables [Table 9.6](#), [Table 9.8](#), or [Table 9.41](#)), based upon the equivalent number of poles and ampere rating.
NOTE: Interiors include solid neutral and are field convertible to top-feed.
 - If a main circuit breaker interior was selected, select a main circuit breaker (or fuse) from pages [page 7-2](#), [page 7-6](#), [page 7-7](#), [page 7-10](#), or [page 7-11](#), or [Table 9.49](#).
- Select ground bars from tables [Table 9.9](#) or [Table 9.48](#) and any non-standard neutral bars (i.e., 200% neutral for non-linear loads) from tables [Table 9.10](#) or [Table 9.43](#).
- Select any required sub-feed circuit breakers, sub-feed lugs (SFL), or feed-through lugs (FTL) kits:
 - Sub-feed lugs (SFL) or feed-through lugs (FTL) kits: tables [Table 9.11](#) or [Table 9.44](#) in the NQ or NF Accessories sections.
 - Any subfeed circuit breakers: [Table 7.1](#) or tables [Table 9.16–Table 9.20](#) or tables [Table 9.49–Table 9.61](#).
- Determine the total mounting inches required by adding requirements from interior, main circuit breaker, neutrals and ground bars, SFL, FTL, or sub-feed circuit breaker.
- Select enclosure from the tables [Table 9.5–Table 9.14](#), [Table 9.22](#), [Table 9.24](#), [Table 9.26](#), [Table 9.42](#), [Table 9.45](#), and [Table 9.46](#).
Type 1—select box and front (cover) catalog number corresponding to interior catalog number.
Type 3R, 5, 12—select enclosure. Cover for Type 3R, 5, 12 is included with the enclosure.
- Select the branch circuit breakers to be installed in the panel.
For NQ panelboards use QO circuit breakers from tables [Table 7.1](#), [page 7-13–page 7-14](#), or QOB circuit breakers from tables [Table 9.16–Table 9.20](#).
For NF panelboards, use E-frame circuit breakers from [Table 9.49](#).
- Select options and accessories from tables [Table 9.7–Table 9.15](#) or [Table 9.43–Table 9.48](#).
NOTE: Additional NF and NQ options may be found in the Supplemental and Obsolescence Digest, Section 4.

Powerlink™ Intelligent Lighting Control Systems

Powerlink intelligent lighting control systems are ideally suited for controlling lighting and other loads in commercial, institutional, and industrial facilities. Such systems are typically used to lower utility cost by switching branch circuits OFF during non-occupied periods when lighting is unnecessary or during peak demand periods when a partial reduction in load can save significant money.

These systems utilize remotely operated circuit breakers to switch branch circuits ON and OFF via a time schedule or by an externally generated signal (typically a low voltage wall switch, photocell, access system, fire alarm or building management system). All Powerlink components mount inside a standard lighting panelboard to provide a compact, space saving installation.

Powerlink intelligent lighting control systems feature a powerful microprocessor based controller that provides system intelligence for 168 remotely operated branch circuits. Master panelboards contain the control electronics, power supply, and control bus strips for up to 42 branch circuit breakers. Sub-panels extend the capability of the system by allowing remotely operated branch circuit breakers to be operated from the master controller via a simple, 4-wire, sub-net connection.

Powerlink panels systems have the capability of being networked together and operated from a central workstation or via a remote modem connection. Powerlink software allows users to remotely configure the system, change time schedules, monitor circuit breaker or input status, and override zones and breakers.

BACnet Capability

The Building Automation and Control network (BACnet) communication protocol is incorporated into the Powerlink™ controller design. The addition of the BACnet protocol allows Powerlink panels to be easily integrated into a Building Automation System (BAS) employing this open communication standard without the need for communication bridges or gateways.

Controller Models

The following Powerlink controller models support 'native' BACnet communications:

- NF2000G3 — Ethernet communications, shared remote inputs, network time synchronization
- NF3000G3 — Email upon alarm, onboard web pages for status/control/configuration
- NF3500G4 — Embedded web server, 256 communication inputs available

Powerlink available in column width design

Factory Assembled System

The following factory engineered pricing procedure may be used to price either 240 V or 480Y/277 V Powerlink intelligent lighting control systems:

- Select system type and interior size from Table 9.79 , page 9-29. All Powerlink panels are furnished with either 1 or 2 control bus strips.
- All Powerlink panels use NF type panelboard interiors, boxes, and trims and are suitable for either 240 V or 480Y/277 V systems.
- Select branch circuit breaker requirements. Powerlink panels can accommodate both ECB-G3 remotely operated circuit breakers and EDB, EGB and EJB standard branch circuit breakers.
- Refer to panelboard section for additional panelboard accessories.
- For complete price, order by description.
- Apply appropriate discount schedule.

Energy Management (EM) Lighting Control System

The Powerlink Energy Management (EM) Lighting Control System incorporates the same features found in the Powerlink 3000 level system, in addition to integral branch circuit and optional main metering for energy monitoring and verification of the lighting system. Integral metering is accomplished using the PowerLogic™ Branch Circuit Power Meter (BCPM), which is a highly accurate, full-featured multi-branch circuit power meter that provides unrivalled low-current monitoring.

The Powerlink system reduces electrical energy consumption associated with lighting and other loads by automatically switching loads off during non-occupied periods. The Powerlink system is often ideal for reducing the peak demand by switching unnecessary lights off in response to an automated response signal or when high time-of-day energy tariffs occur.

Powerlink Energy Management (EM) Lighting Control System

- Integral individual and optional mains metering to provide utmost flexibility in assuring a sustainable metering and verification program
- Monitors current, voltage, energy consumption, demand, and power factor for complete energy profiling
- Accumulated metering information transmitted via Modbus communications interface
- Data updates occurring within seconds to provide timely preventative maintenance information
- Optional EGX web interface for storing and reporting data via standard web browser (suggested for applications without Energy Management System [EMS] software)
- Alarm indication when parameters approach user-configured thresholds
- 16 hard-wired inputs available for connection to devices with physical dry-contacts
- 64 communication inputs available for network connection
- 16 independent time schedules, each can be configured into 24 distinct periods
- 7-day repeating clock with changeable automatic daylight savings time

[37] To complete the catalog number, replace the blank () with the appropriate interrupt rating (G, J, K, or L).
 [38] For 100% rated circuit breakers add a "C" in the 9th character place. For example, the catalog number for a 100% standard-type trip unit with LI trip functions at 250 A would be PGA36025CU31A.
 [39] The L interrupt rating is supplied in 480 V only. Change the 5th character (voltage rating) from a 6 (600 V) to a 4 (480 V); for example, PLA34025U31A.
 [40] See Table 9.138 PowerPact P- and R-frame Interrupt Ratings, page 9-48 for interrupt ratings.

[41] To complete the catalog number, replace the blank () with the appropriate interrupt rating (G, J, K, or L).

[42] For 100% rated circuit breakers add a "C" in the 9th character place. For example, the catalog number for a 100% standard-type trip unit with LI trip functions at 250 A would be PGA36025CU31A.

[43] The L interrupt rating is supplied in 480 V only. Change the 5th character (voltage rating) from a 6 (600 V) to a 4 (480 V); for example, PLA34025U31A.

[44] See Table 9.138 PowerPact P- and R-frame Interrupt Ratings, page 9-48 for interrupt ratings.

[1] 6 in. enclosure extension is required for HCRU I-Line panelboard.

[2] 9 in. enclosure extension is required for HCP-SU I-Line panelboard.

[1] Horsepower rating applicable to 480Y/277 V system only.

[2] "1" indicates one normally open and one normally closed contact.
"2" indicates two normally open and two normally closed contacts.

[3] Blank units cannot be modified to accept a switch interior.

[4] Use 300 Vac Class T fuses only.

[5] Class J fuse provisions—to field modify switch, move load side fuse base to position indicated in switch. Not available on 100-30, 100-60, or 800 A switch units.

[6] 250 Vdc rating.

[7] Use 600 Vac Class T fuses only.

[1] (#) = Number of conductors per phase.

[2] Use only 90 °C insulated conductors based on an ampacity of 75 °C conductors.

[1] When selecting a panelboard with SurgeLoc SPD, an additional 12 circuit positions (6 adjacent mounting spaces per side) are occupied. For example, if the desired number of circuits is 30, refer to page 9-11 and page 9-12 to select the NQ442L2/NQ442L2C interior and corresponding Box and Trim.

[2] SPD is only available up to 72 desired circuit counts.
